*20% Discount applies on Hot Water Heaters

PLUMBING SERVICES AVAILABLE ALSO

1. Clean and inspect outside **condensing unit** and check for proper operation and air flow. This is the #1 reason for air conditioning compressor failures. Proper care will decrease the operating cost and increase the life of the unit.
2. Check outside condensing **fan blade** for tightness and proper operation.
3. Inspect and clean **condensate drains** and **pumps** to avoid any unnecessary water damage.
4. Check **refrigerant** for proper pressure and possible leaks.
5. Inspect **all controls** for proper function cycling and any dangerous conditions that may exist.
6. Lubricate **blower** assemblies, check **blower belts** and **motors** to extend equipment reliability.
7. Check **amp draw** and **capacitor** for proper operation.
8. Check and replace **air filter**, if necessary, for proper air flow and operation.
9. Clean **evaporator coil** if accesible.
10. Check **superheat/subcooling** charge for proper temperatures.
